

Serial No. 10/620,723  
Art Unit 1724

**AMENDMENTS TO THE ABSTRACT:**

Please amend the Abstract as follows:

Disclosed is a cyclone-type dust collecting apparatus for a vacuum cleaner; ~~which can effectively and separately collect dust and also prevents a backflow of fine dust. The apparatus that~~ includes a cyclone body having an air inlet port and an air outlet port, for forming a vortex current of air which is introduced through the air inlet port and contains dust, a dust collecting container removably coupled to the cyclone body so as to collect the dust separated by centrifugal force of the vortex current in the cyclone body, a double ~~impeller~~ grill assembly disposed at an upstream portion of the air outlet port in the cyclone body to prevent the air from flowing back through the air outlet port, and having a dual structure having an outer grill and an inner grill, and a fine dust collecting means disposed at a downstream portion of the double ~~impeller~~ grill assembly in the cyclone body to collect fine dust which is not removed by the double ~~impeller~~ grill assembly.
